    - Data analysis
  - Results
- Conclusion and outlook

# Introduction / Theoretical background

- Reading habits and use of digital devices
  - Nature of what and how we read has changed / is changing with the increasing use of, and advance of new technology (cf. Stavanger declaration, 2019)
  - « Digital reading »: → adolescents' and adults' typical reading habits (Duncan et al., 2016; Gilleece & Eivers, 2018; Pfof, Dörfler & Artelt, 2013)
  - In assessment: increasing use of digital devices

# Introduction / Theoretical background

- Reading on digital devices: Do reading processes differ? Do we assess what we want to assess / do we assess what we should assess?
  - Poorer reading performance for reading linear narrative and informational texts on computer screen as compared to paper-based reading (Mangen, Walgermo, Brønneick, 2013)
  - Delgado, Vargas, Ackerman & Salmerón (2018): Meta-Analysis
    - Higher comprehension outcomes within paper-based settings, especially
      - in time-constrained settings
      - in tests using informational texts or a mixture of informational and narrative texts
    - → "digital environments not always best suited to fostering deep comprehension and learning" (Delgado et al, 2018, p. 33)
  - Readers seem to adopt a shallower learning style in a digital environment (Lauterman & Ackerman, 2014)
  - Reading certain types of digital texts, such as social media texts seems to promote rapid, shallow treatment of information (Annisette & Lafreniere, 2017):

# Introduction / Theoretical background

- Do « digital reading habits » affect the outcome of reading assessments?
  - “The more people use digital media for these shallow interactions, the less they will be able to use them for challenging tasks” (Delgado et al., 2018, p. 34)
  - correlations between reading habits and text comprehension (early + middle adolescence)
    - **Correlation between frequency of reading digital texts** (e.g. E-Mails, Online searching, online forums) and reading comprehension **tends to be negative**, but results are not always coherent
      - Negative for emails and forums (Pfost, Dörfler & Artelt, 2013)
      - No clear tendency for emails, negative for computer gaming (Duncan et al. 2016)
    - **Positive correlations / beta-parameter:**
      - Reading novels, stories or tales – reading comprehension (Pfost, Dörfler & Artelt, 2013)
      - Fiction book reading – reading comprehension (Duncan et al., 2016)
    - **But:** In these studies, reading comprehension measured by referring to paper-and-pencil test

# Research questions

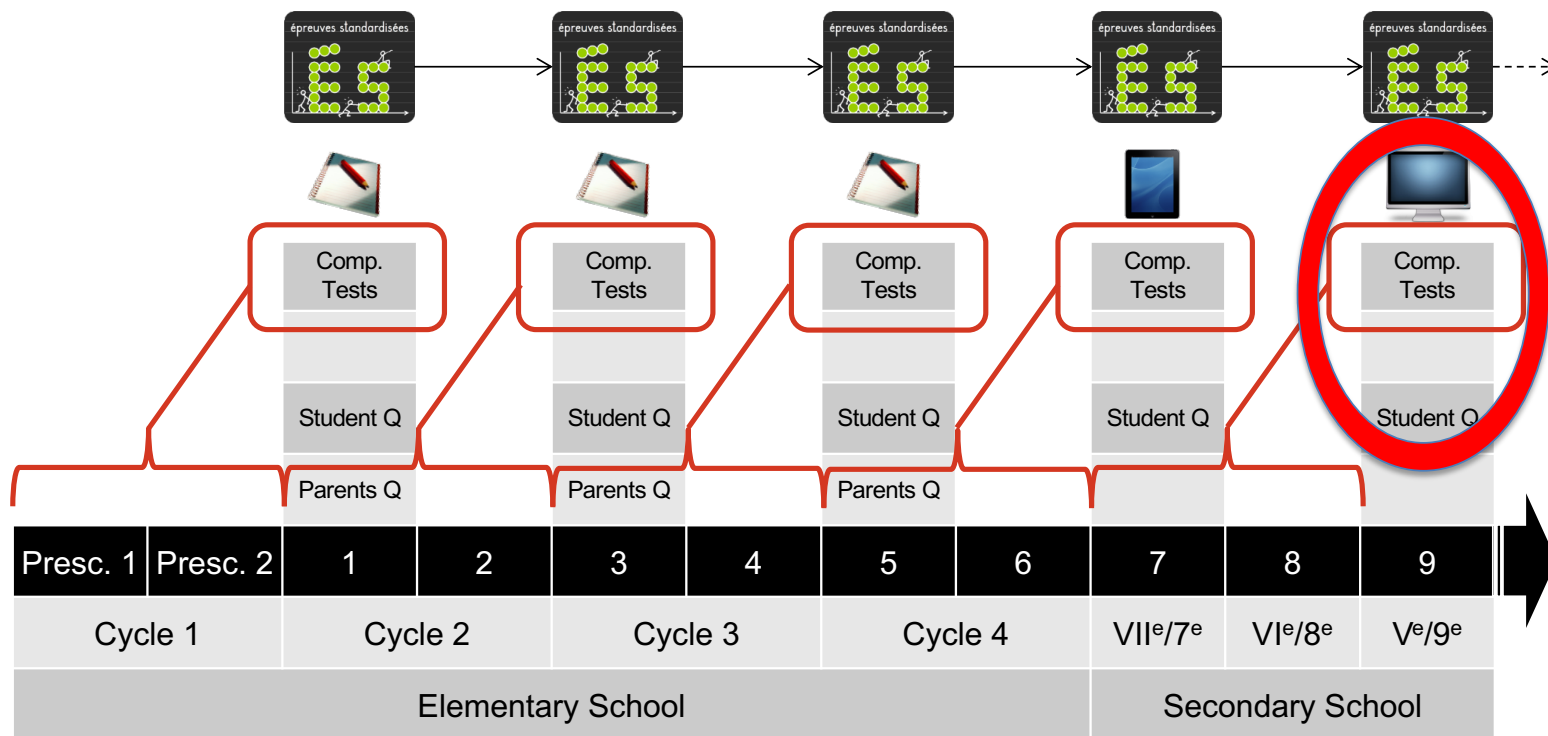

- Reading habits: Effects on reading comprehension measured in a digital test environment
  - Do “digital reading habits” have an impact on reading performance, when reading test is presented on digital device?
    - Students no more used to “deep reading” → negative impact to be expected
    - More familiar with digital devices → positive impact to be expected
  - Reading of narrative texts assumed to positively affect reading comprehension, even in a digital environment; but: reading on digital device assumed to be “shallower” → link might be less pronounced?
- Implications for reading test construct?

**- Beispielaufgabe Deutsch Leseverstehen -**

Gorillas sind keine gewalttätigen Monster, sondern friedfertige, mitfühlende und tolerante Wesen.

Der Gorilla-Halbstarke Pablo, vor Kraft und Übermut schier berstend, kam „beinahe fliegend angestürmt“, direkt auf Jörg Hess zu. Der Zoologe aus Basel warf sich ins üppig verfilzte Gestrüpp am Steilhang des Vulkans Bisoke und versuchte, aus der „Flugbahn“ des kapitalen SchwarZRückens zu rollen. Vergebens. „Pablo landete mit beiden Füßen auf meinem Kreuz“ und verschwand hangabwärts im Dschungel. Vor Schmerzen gelähmt und laut nach Luft ringend, lag Hess im ruandischen Virunga-Gorillaschutzgebiet, ganz in der Nähe der Forschungsstation der 1992 ermordeten Affenforscherin Dian Fossey. Er konnte nicht aufstehen und glaubte, sein Rücken sei für alle Zeiten ramponiert. Plötzlich kam die Gorillafrau Maggle herbei. „Sie setzte sich ganz nahe zu mir, näherte sich meinem Gesicht auf Zentimeterdistanz und schaute mir lange reglos in die Augen. Plötzlich strich sie mir mit einer Hand mehrmals sanft über die Haare“. Hess war überwältigt.

Hess findet es „faszinierend“, aber keineswegs verwunderlich, dass im Zoo von

26 to 30 items per test

Mostly MC items

Items measuring:

1. Find and extract information within a text (explicit + paraphrased)
2. Generate inferences, integrate information distributed across the text, go beyond literal meaning (e.g., main idea)

... gute Eltern für ihren Nachwuchs...

Difficulty level ± B1.1 – B2.1

- ... gute Eltern für ihren Nachwuchs.
- ... ungleiche Spielgefährten für die Menschen.
- ... Weltrekordler in punkto Nachwuchs.

# Study 1: Methodological approach - Instruments

- Questionnaire on background variables (socio-economic background, language spoken at home, etc.)
- **questionnaire on extra-curricular reading habits** (based on Pfost, Dörfler & Artelt, 2011)

*How often do you read...?*

- stories, novels, tales
- journals/newspapers
- magazines
- non-fiction books
- comics
- texts in online encyclopedias
- e-mails
- online forums
- short messages
- texts in video games

**6-point scale:**

**1 (almost never/never)** – 2 (once a month) – 3 (several times a month) – 4 (several times a week) – 5 (once a day) – **6 (several times a day)**

# Study 1: Methodological approach - Sample

- 6261 students from grade 9
- among which 5177 have attended public schools from kindergarten on
- For 3014 students, German reading comprehension score from grade 3 available
  - 49% girls
  - 47.3% with migration background
  - attending 3 school types :
    - ES (42%)
    - EST (47.7%)
    - EST-préparatoire (10.3%)

# Study 1: What do young people read? Descriptive results

## Study 1: What do young people read? Descriptive results

<i>classical texts</i>			<i>digital texts</i>		
	mean	SD		mean	SD
magazines	1,85	1,2	e-mails	3,2	1,7
journals	2,22	1,4	short messages	5,25	1,5
comics	1,89	1,3	online forums	4,94	1,7
stories, tales	2,38	1,5	online encyclopedia	3,07	1,6
non-fiction books	1,88	1,3	texts in video games	3,6	1,9

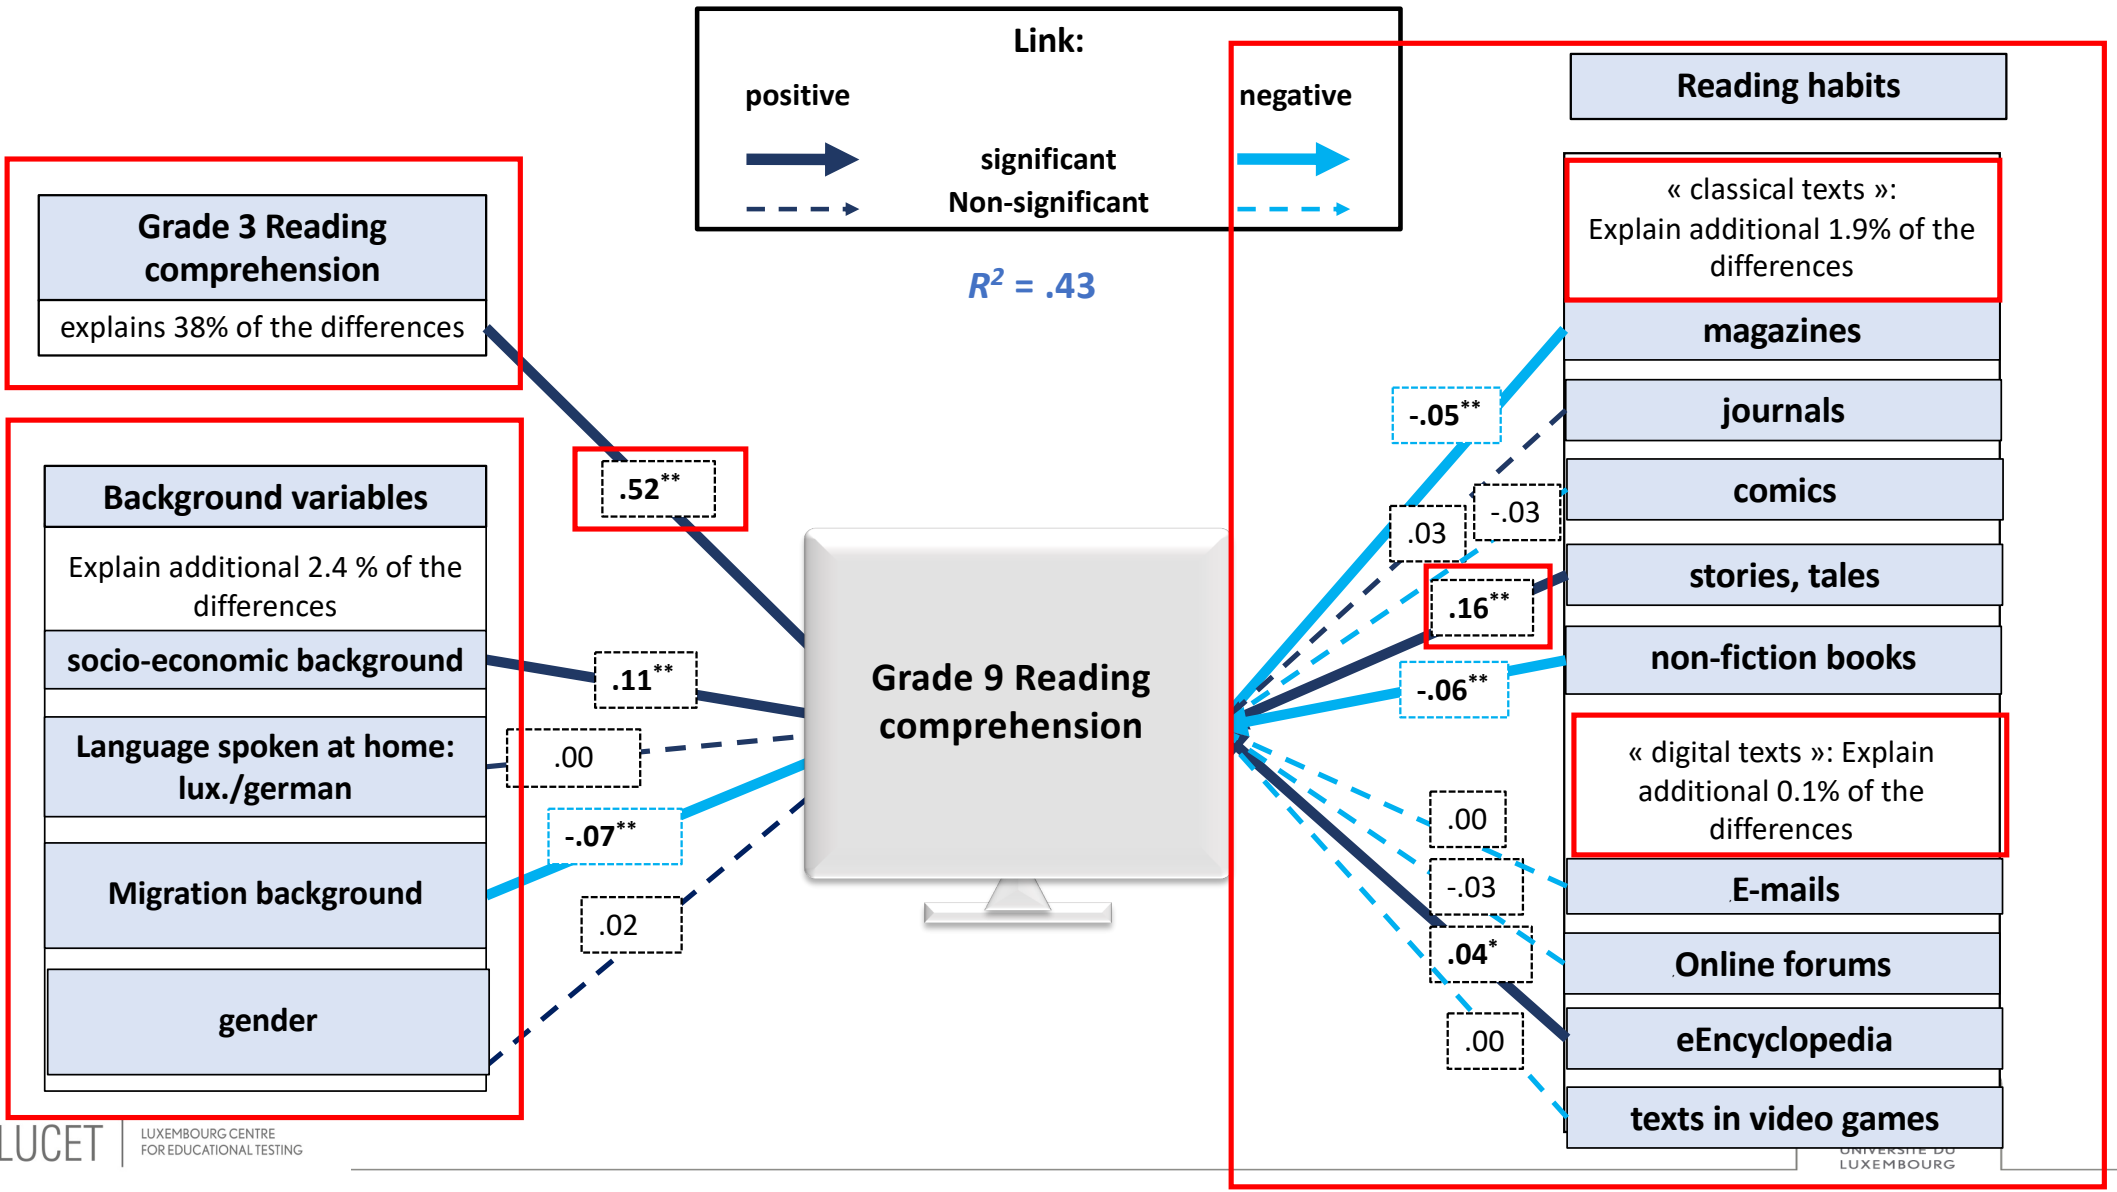

### 6-point scale:

1 (almost never/never) – 2 (once a month) – 3 (several times a month) – 4 (several times a week) – 5 (once a day) – 6 (several times a day)

# Study 1: Methodological approach - Analysis

Analysis of the differential effect of the different variables on reading comprehension

- linear regression, stepwise method
  - **dependent variable** : reading comprehension in **German**
- background variables:
  - SES: HISEI (according to Ganzeboom, de Graaf, Treiman & de Leeuw, 1992)
  - migration background (student and/or (grand-)parent(s) born abroad)
  - language spoken at home (GER/LU)
  - Gender
- reading habits, with regard to different types of texts
- Grade 3 Reading comprehension score

3 Test versions (1 for each school type)

6 texts per test

mix of literary texts and informational texts

text length: between 160 and 770 words

No switching between different windows necessary; no hyperlinks  
or animations

- ... gute Eltern für ihren Nachwuchs.
- ... ungleiche Spielgefährten für die Menschen.
- ... Weltrekordler in punkto Nachwuchs.

# Study 2: Methodological approach - Instruments

- Questionnaire on background variables (socio-economic background, language spoken at home, etc.)
- **Question on “reading for pleasure”**

***How often do you read for pleasure ?*** (6-point scale)

- **1 (I don't' read for pleasure)**
- 2 (once a month)
- 3 (several times a month)
- 4 (once a week)
- 5 (several times a month)
- **6 (daily)**

# Study 2: Methodological approach - Instruments

## • Question on preferred reading material

### *What do you prefer to read ?*

- magazines, journals, books (in printed form)
- e-magazines, e-journals, e-books (in digital form)
- Texts in social media, online forums, blogs, articles in online encyclopedia, etc. (in digital form)

« Digital texts »

« Analog texts »

« Classical print texts »

« New media texts »

# Study 2: Methodological approach - Sample

## Grade 7:

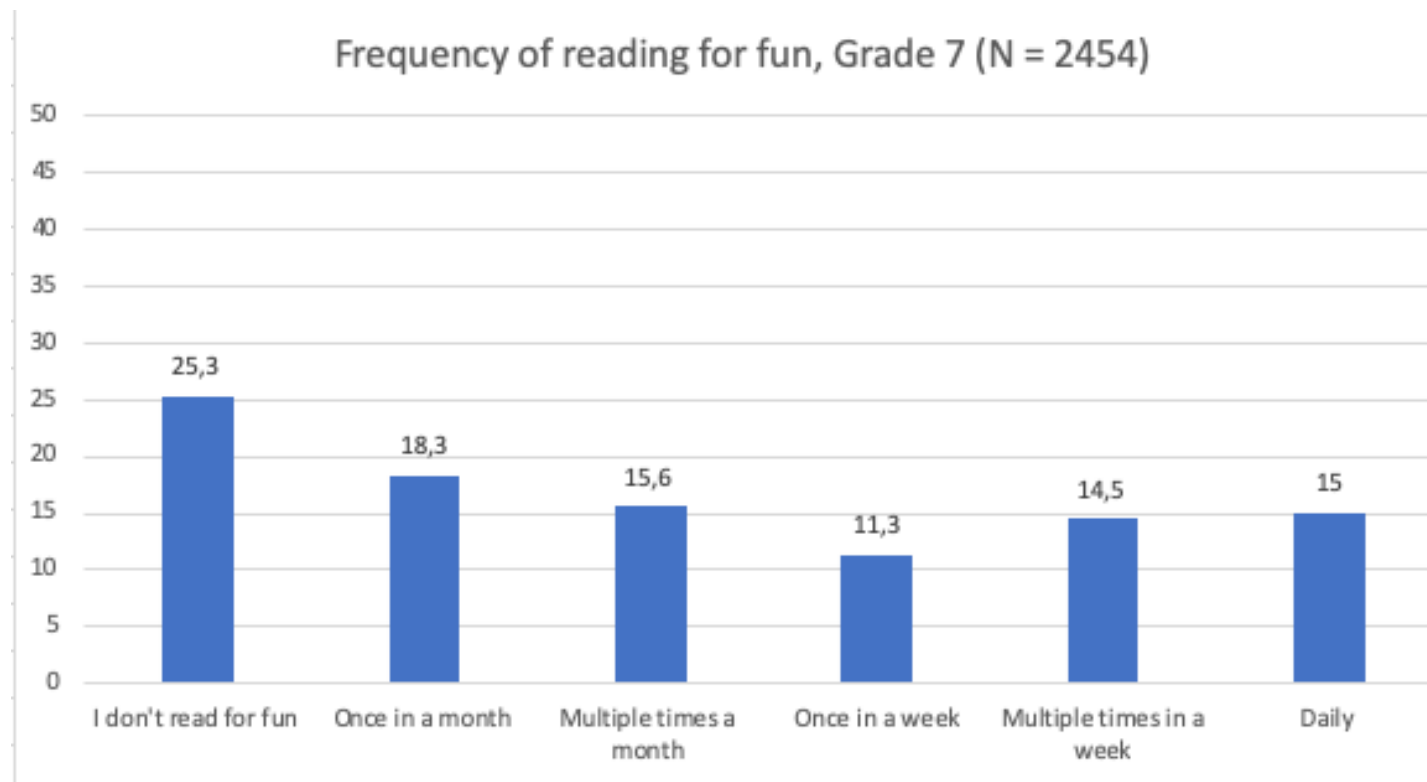

- 2466 students
- 58.2% with migration background
- 47% girls
  - attending 3 school types :
    - ES (25.5%)
    - EST (58.3%)
    - EST-préparatoire (16.2%)

## Grade 9:

- 6279 students
- 47.3% with migration background
- 48% girls
  - attending 3 school types :
    - ES (28.5%)
    - EST (61.6%)
    - EST-préparatoire (9.9%)

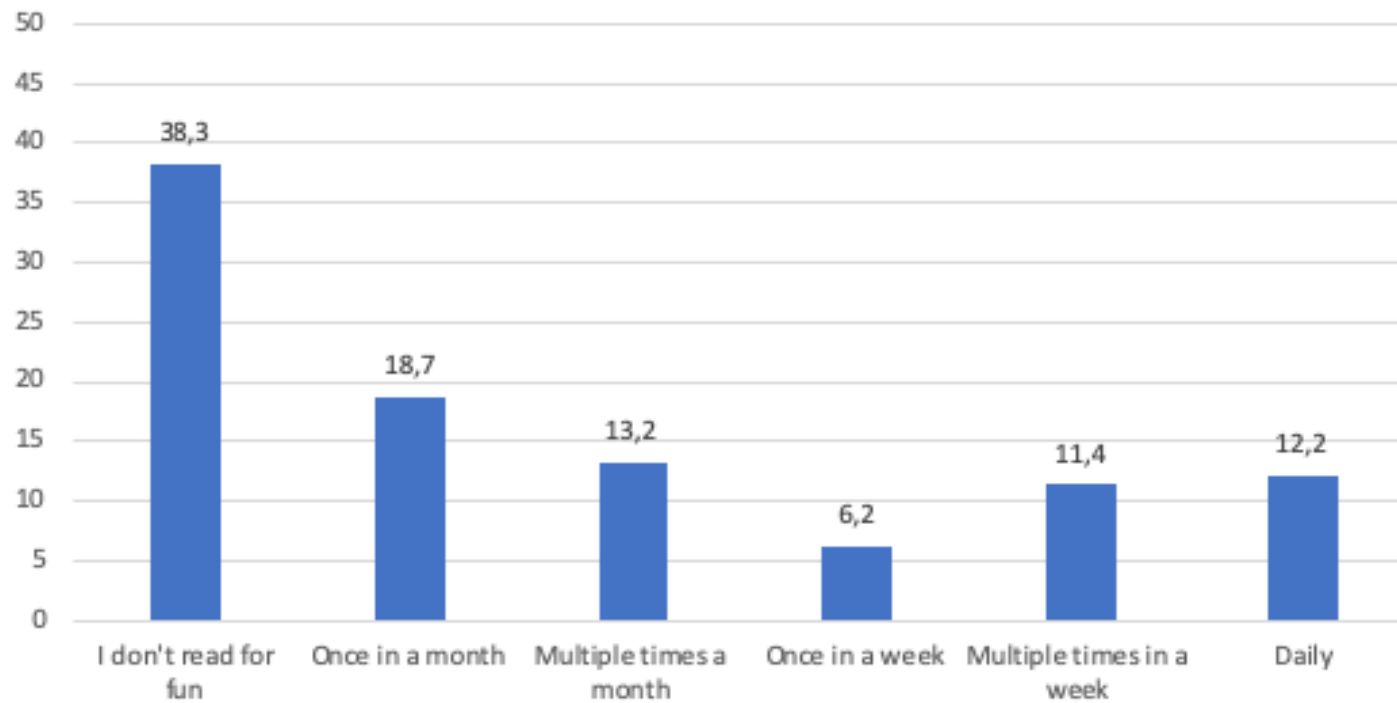

## Study 2: Descriptive statistics – frequency of reading for pleasure among 7<sup>th</sup> and 9<sup>th</sup> grade pupils

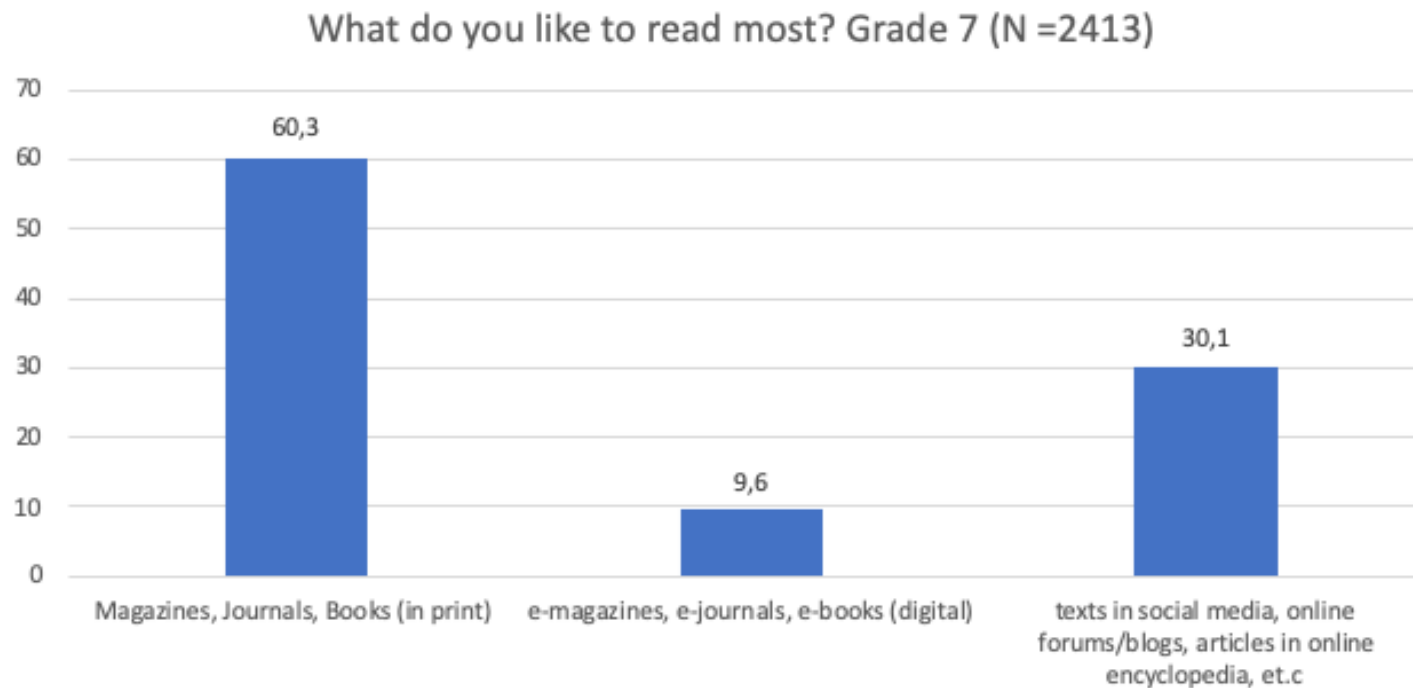

## Study 2: Descriptive statistics – frequency of reading for pleasure among 7<sup>th</sup> and 9<sup>th</sup> grade pupils

Frequency of reading for fun, Grade 9 (N = 6241)

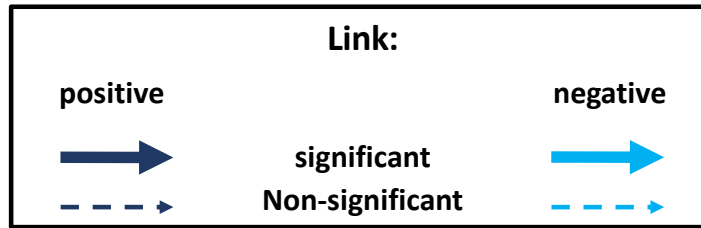

## Study 2: Descriptive statistics – preferred reading material among 7<sup>th</sup> and 9<sup>th</sup> grade pupils

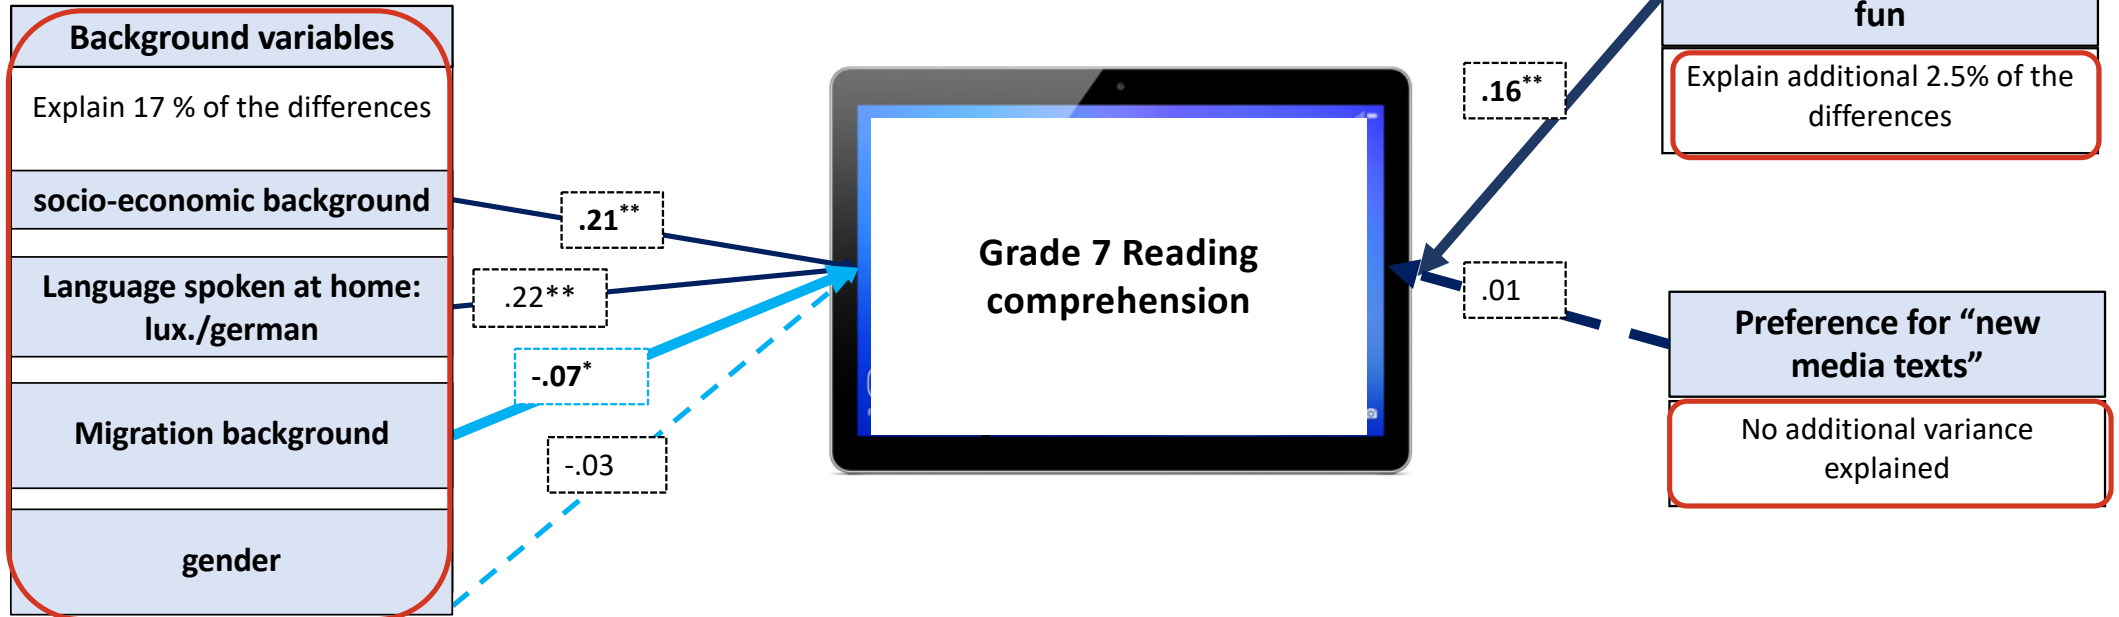

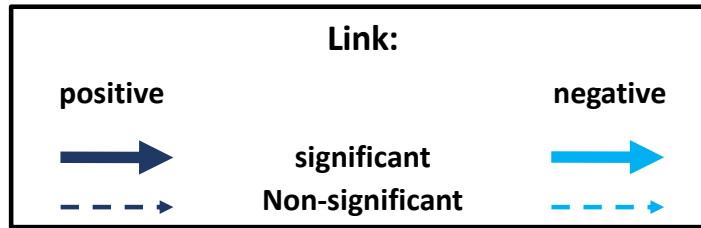

## Study 2: Descriptive statistics – preferred reading material among 7<sup>th</sup> and 9<sup>th</sup> grade pupils

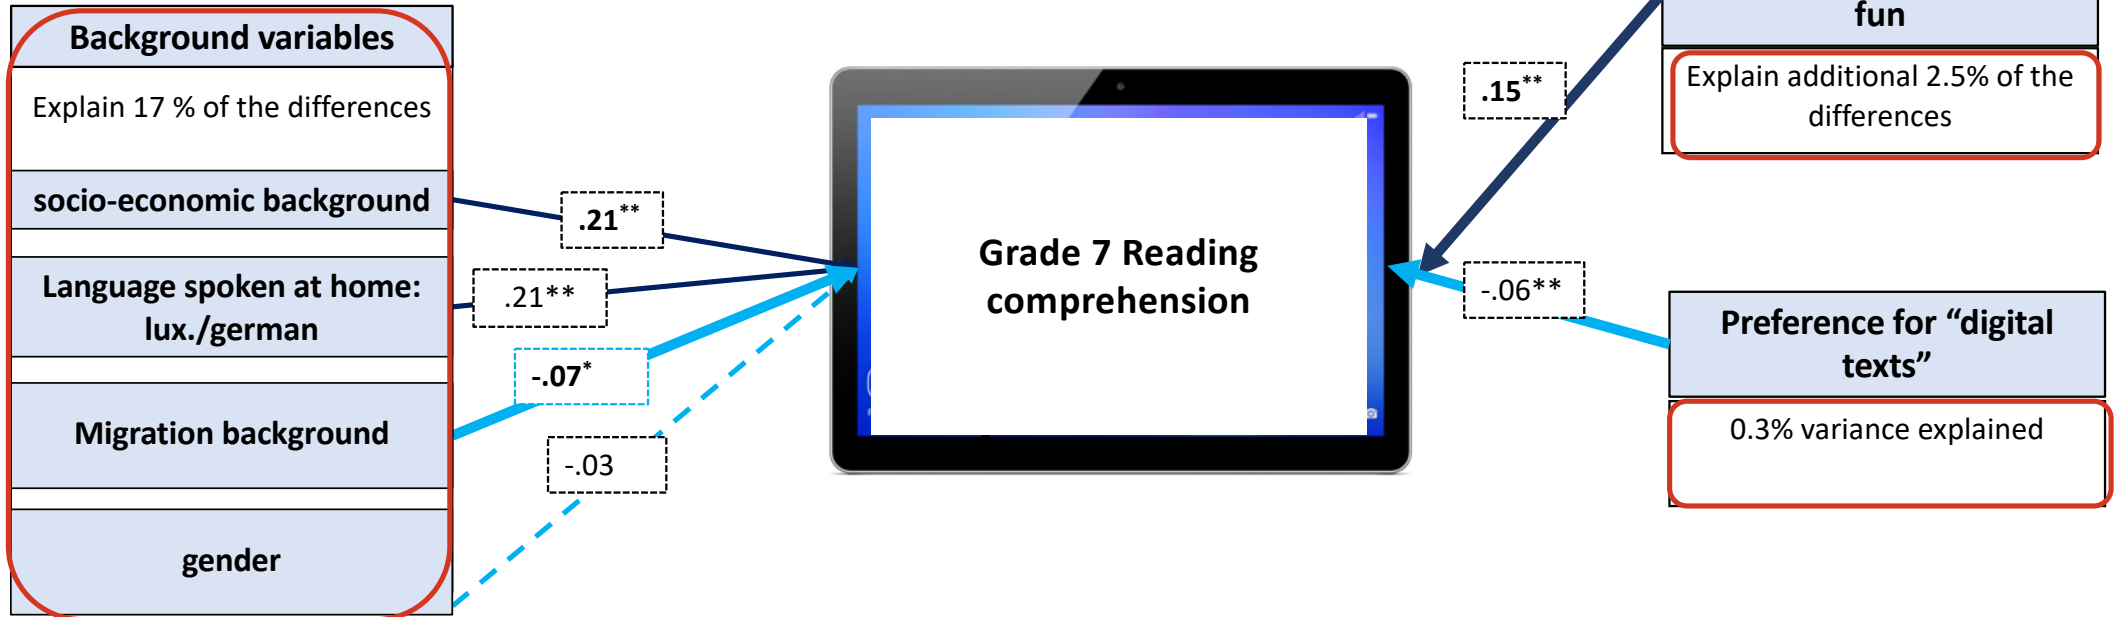

$R^2 = .20$

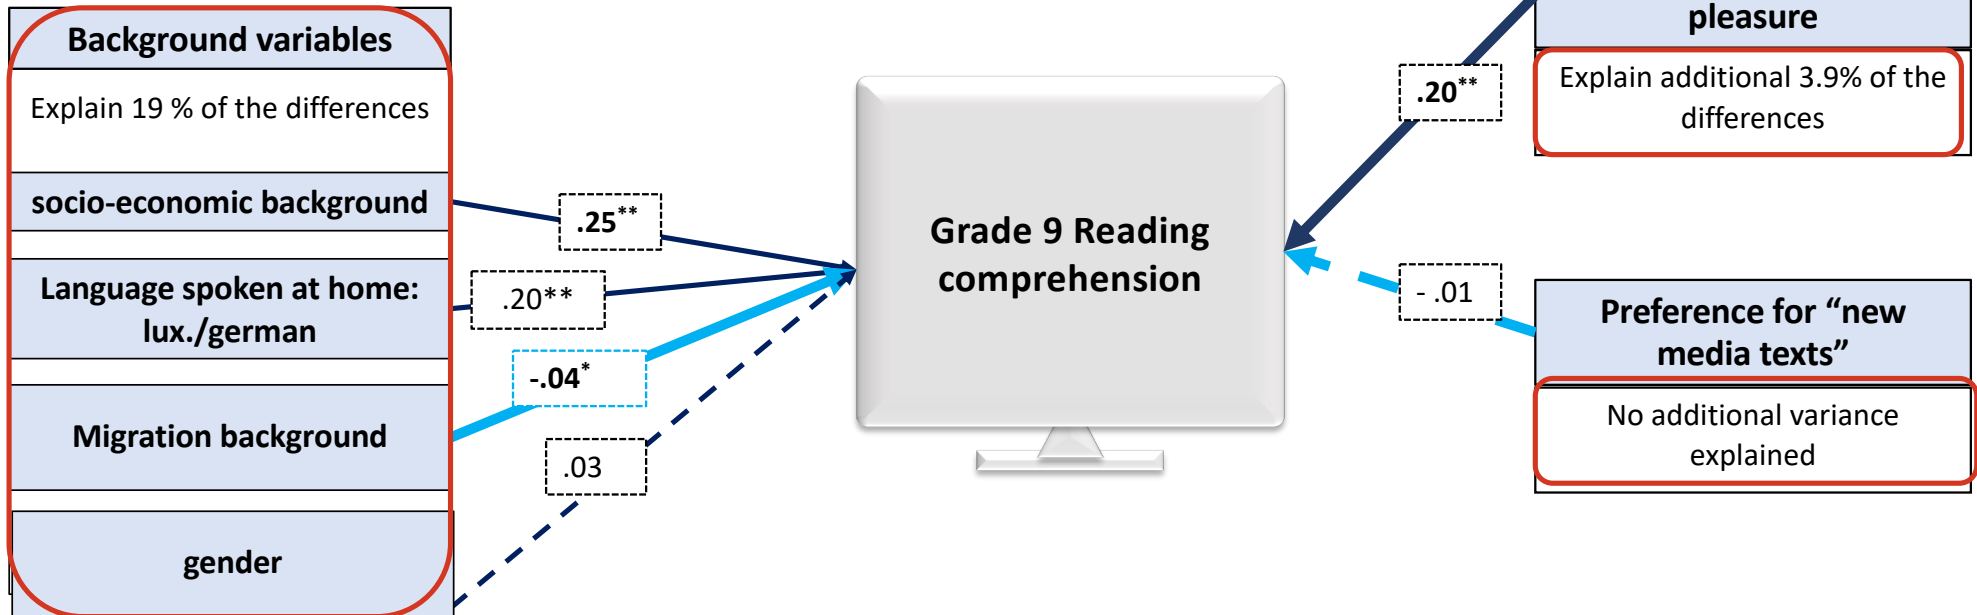

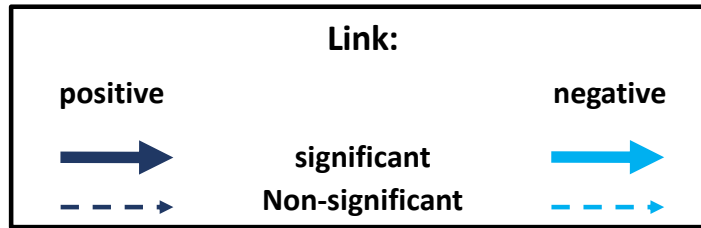

$R^2 = .20$

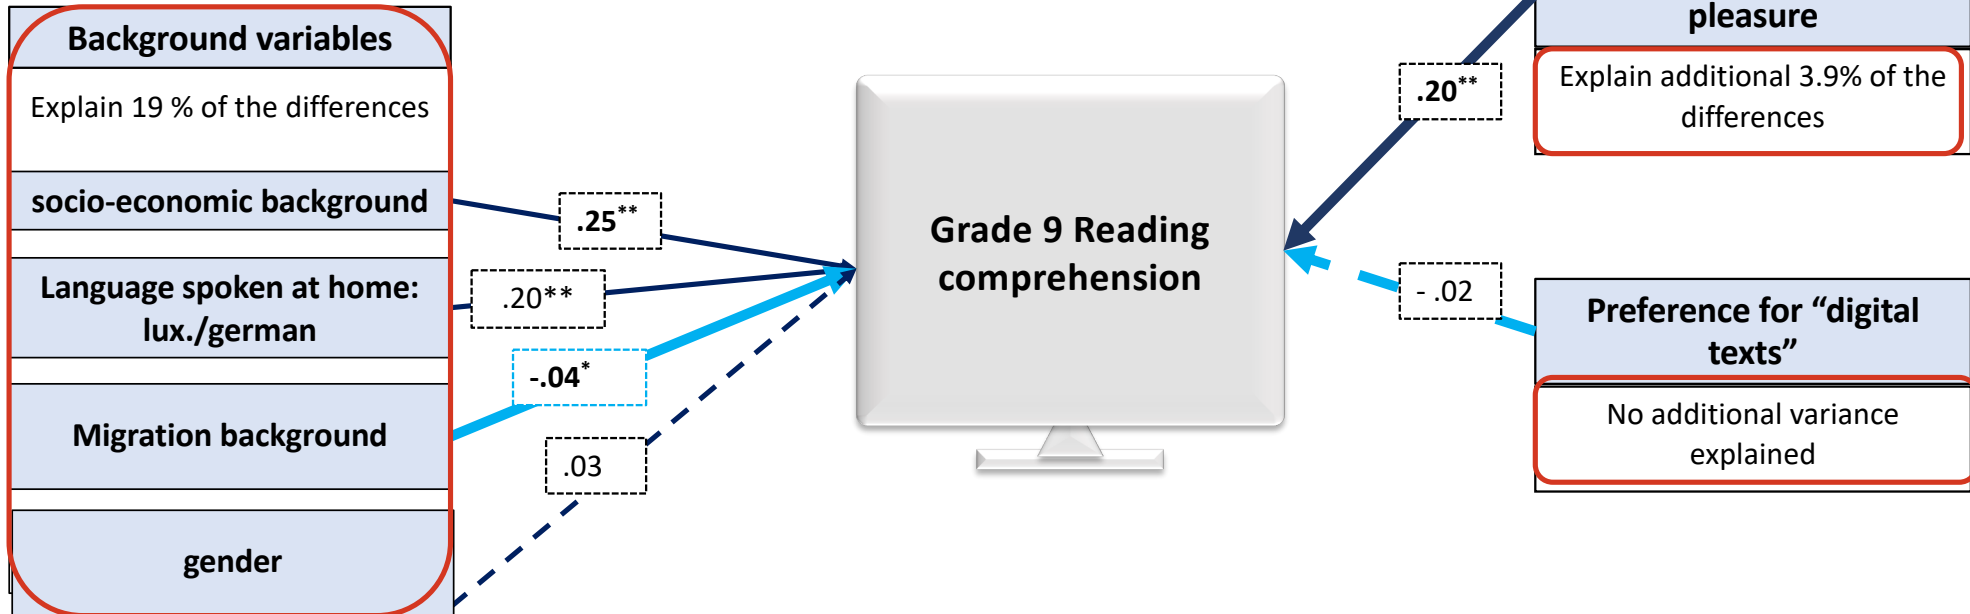

$R^2 = .23$

$R^2 = .23$

# Conclusion and perspectives

# Conclusion and perspectives

- Reading habits: added value as compared to background variables
- Reading narrative/literary texts remains important for development of reading comprehension – a conclusion that is also true when reading assessed in a digital environment
- Reading digital texts or general preference for digital texts / new media texts: negligible effect, even with regard to reading comprehension as measured in a digital test environment.
- Reasons / explanations for these interrelationships remain unclear:
  - No (negative) effect because current test measures “shallow” reading only?
  - No (positive) effect because texts and items presented in a linear way, with no complex intra- and inter-textual links, navigation demands and animations?
  - Would there have been an even stronger relationship between the reading of narrative texts and reading comprehension in an “analog” environment?

# Conclusion and perspectives

## Questions for future analyses

- Distinguish between “deep” and “shallow” reading by referring to the “expeditious” and “careful reading” framework (Khalifa & Weir, 2009)
- Distinguish between different kinds of texts:
  - Long vs. short texts
  - Literary vs. informational texts

# Conclusion and perspectives

- Digital texts / new media texts highly attractive for adolescents
  - Reading in a digital environment is becoming one of the main ways in which individuals gather information, communicate and learn
  - Need to consider that reading on digital devices is different from reading in an analog environment
- implications for construct to be assessed

# Conclusion and perspectives

- assessment of 2 reading constructs – assessment of “Bi-literacy”? (Wolf, 2018)
- assessing reading competence in a typical digital environment, ask test takers to, e.g.,
    - generate inferences across multiple texts and sources,
    - deal with conflicting intertextual information,
    - assess quality and credibility of different texts,
    - navigate through multiple texts, etc.
- (cf. OECD, 2019)
- AND
- Assessing “deep” and “higher-level” reading competence (in a digital or print environment?)

Thank you for your attention!
